Let us Do

While measuring, I get 7 handspans and you get 6 handspans.

Why do both the measures differ?

While measuring, I get 4 cubits and you get 3 cubits.

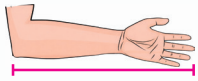

Why do both the measures differ?

Ask the children to measure the length of the desk using measures such as handspan and cubit, and the length of their classroom using measures such as footspan and pace. Make them realise that they differ from one person to another.

Let us Practise

Complete the table by estimating the length of the desk and the classroom and also measuring them with the given units.

Units	Estimated length of the table		Actual length of the table	
	Your measurement	Your friend's measurement	Your measurement	Your friend's measurement
				
				

Units	Estimated length of the classroom		Actual length of the classroom	
	Your measurement	Your friend's measurement	Your measurement	Your friend's measurement
				
				

What did you learn from the table given above?

- ☐ Both got the same measurements.
- ☐ Both got different measurements.
